I. PAPOULIS-CHAPTER-15

Question 15-7: Show that the sums $s_n = x_1 + x_2 + \dots + x_n$ of independent zero mean random variables form a martingale.

Solution: Given,

$$s_n = x_1 + x_2 + \dots + x_n \quad (\text{I.1})$$

where, x_n are i.i.d. random variables. We have

$$s_{n+1} = s_n + x_{n+1} \quad (\text{I.2})$$

so that,

$$E\{s_{n+1}|s_n\} = E\{s_n + x_{n+1}|s_n\} \quad (\text{I.3})$$

$$= s_n + E\{x_{n+1}\} \quad (\text{I.4})$$

$$= s_n \quad (\text{I.5})$$

Hence, $\{s_n\}$ represents a Martingale.
